

# Kaleidoscope

PYP Magazine ~ September 2021

# Kaleidoscope - PYP Magazine

*Our blank canvas filled with a kaleidoscope of our ponderings .....*

Our minds are like a Kaleidoscope. Every instant changes take place through new learning and experience, its contents change, new harmonies, new contrasts, new combination of every sort, images swirling, changing hues, new patterns shine through.

Like the kaleidoscope our minds are ever-changing, with no two minds being alike. As a kaleidoscope operates on the principle of multiple reflections, so does our mind.

If we pick up a kaleidoscope and look through it, we can witness the beauty of colours and patterns of light and reflection. It is the same when expressing ourselves. Each of us, inside, have our own patterns and reflections. Our feelings, thoughts, ideas, memories, which when shared through words, through similes, metaphors, analogies, gets us a little closer to see the colours that make our minds so beautiful.

Peek into our magazine 'Kaleidoscope' where light reflects shades of every colour, in bits and pieces but exquisitely beautiful nevertheless !

Our world looks universally more beautiful through our KALEIDOSCOPE!

*-By Ms. Shenoba*

# Why PYP Magazine?

A School's magazine holds up a mirror, a mirror that reflects the soul of the education system. It resonates our learning culture, identity of the educational institutions and is an integral part of the education system. School magazines are also voices and aspirations of students, a bridge that communicates with parents and teachers, a social document of creative blend where essays, poems, plays and stories usually hidden inside classrooms and notebooks find a stage with spot lights for all to see. The added impetus of seeing their name in print can make the students try their best as a writer, this is an endeavour by SNIS to ignite the little creative minds to spark and pave way for wonderful literary work. Each individual is an entity of immense potential and creativity which requires proper exploration and manoeuvre by the school and teachers.

School magazines give the young and talented writers an opportunity to feel intently, observe keenly, think deeply and thereby express themselves in a distinct way.

SNIS's PYP magazine 'KALIEDOSCOPE' hopes to channelize the budding talented writers of PYP in encouraging their writing skills by appraisal which inspires and motivates them to read and write much more.

Our students have a lot of potential within them which needs proper channelization and outlet. KALIEDOSCOPE' will provide a wonderful podium for these young potentials to showcase their talent as writers and express themselves into a conglomeration.

Finally, the PYP magazine can serve as a great memoir to recollect fond memories of School Life during primary years. Therefore, it's a little precious piece of childhood captured in words.

*-By Ms. Shenoba*

# Ariel shot - From desk of our Head of Primary School

This has been an exploratory and exciting year in the Primary Years Programme at SNIS. Looking back on the days when students walked into school for a new year of classes and comparing it to the current trend of online and virtual experience, I recall innumerable new experiences and triumphs for students in their journey of life-long learning as well as wonderful revelations of students' understanding and creativity.

Working together, our homeroom teachers and students throughout the PYP have woven many new skills and practices into our development of the Primary Years Programme. Together, they bring to you this magazine which showcases creativity and language development skills of our students and a keen motivation by them to explore new ways of inquiring, organizing learning and sharing things together. A coordinator's privilege is to see all this learning happening in the department. For me, it is an honor to introduce this students' magazine which showcases students taking the lead in directing their own education. It is a great gratification to see students becoming independent learners at an early age.

Many of our PYP students from different grades have now had the experience of working independently and with their peers. This magazine will encourage them and students of the other grades to involve in different activities and get their reflections published here. Through this magazine, I hope to see a commitment from our students involving in activities which will take them beyond the classroom, in many different areas like international-mindedness, cultures, environmental concern, escapades, community service and so on.

Thank You

*Kapil Mehrotra*

*Head of Primary School*

*Sharanya Narayani International School.*

TINY *but* TOUGH

# TARDIGRADES

What do you think of when I pronounce the term “ANIMALS”? Maybe ‘Elephants’? ‘Zebras’ would be a good guess....‘Lions’, perhaps? Some might even picture a Human. Others imagine COWS. Monkeys could be a WILD shot!

I suppose you get the idea...well known life – forms.

However, it so happens that we MISS one of THE most INCREDIBLE organisms which inhabit planet EARTH!

Called.....

**TARDIGRADES!**

(a.k.a. water bears or moss piglets).

Tardigrades survived all and come back for more.

Despite that, they are usually found in water bodies or moss.

Yes people, I know what you are thinking, “I never saw one”!!

That is because they are so teeny-weeny, ranging from 0.05 mm to 1.2 mm. Hence, they are MICRO ANINMALS!!

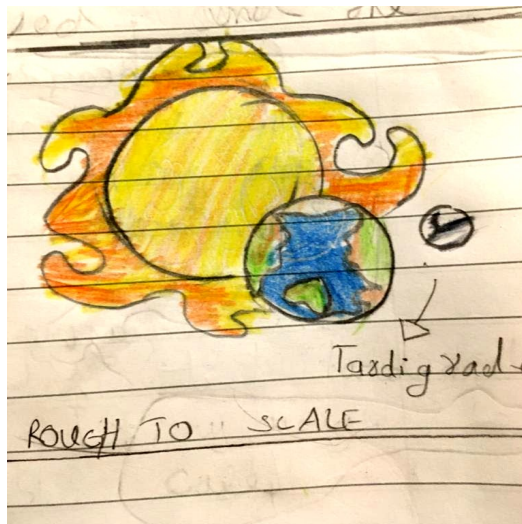

Dinosaurs!! Can you believe that?! They are not even extinct, nope!!

## INCREDIBLE

INCREDIBLE I say! They can survive ANYTHING...total understatement! Some can live in temperatures up to a colossal 150 Degrees Celsius (302 Degrees Fahrenheit)! Others can live in extreme cold. Like -272 Degrees Celsius (-458 Degrees Fahrenheit). Not ONLY that, but they are also capable of populating the extreme biomes on Earth, from the murkiest, deepest depths of the ocean to volcanic landscapes

## EARTH & BEYOND

Furthermore, not only EARTH, but BEYOND. As in 2007, DEHYDRATED Tardigrades were taken into orbit. They were sent into vacuum with BRUTAL RADIATION of space for TEN WHOLE DAYS.

Upon return, more than two-thirds of them have survived, needless to say – No Space Suits!! Can you believe that?! Probably the best Astronauts in history.

Tardigrades survived all and come back for more. Despite that, they are usually found in water bodies or moss.

Yes people, I know what you are thinking, “I never saw one”!!

That is because they are so teeny-weeny, ranging from 0.05 mm to 1.2 mm. Hence, they are MICRO ANIMALS!!

Grade 5

# Tigers

Tigers are from the cat family. They are the biggest cats from the cat family. Tigers are the national animals of India. They are usually orange with black stripes sometimes white, the black stripes help them camouflage while they are hunting. Two tigers never have the same pattern on their body, all of them are different.

Tigers are nocturnal animals ( active at night). Male tigers weigh 90 to 310 Kg and female tigers weigh 65 to 180 Kg. Tigers have muscular bodies with powerful forelimbs, a large head and a tail that is about half the length of its body. Tigers are vertebrates; this means that they have a backbone that supports their body and starts at the skull and ends at the tip of the tail, acting as a flexible central support for the rib cage and limbs.

Tigers are found in many countries like Bangladesh, Vietnam, Cambodia, India, Bhutan, Thailand and many more. The tiger species seems to be 2 million years old according to some Chinese scientists who found a fossil of a tiger which was very old.

Tigers might go extinct in 2030 which is 19 years, there are only 3,900 tigers left world wide. So I hope the government at least try to save the tigers. They are really unique and beautiful creatures.

## Smile

Smile, smile, smile

Don't forget to smile

Smile will help us to be healthy

By making our mind and body relaxed

Laugh by keeping our mouth wide open

Will make others laugh

Smiling helps us feel younger

And also will help to make good friendships

Wrinkled face and half-closed eyes while smiling

Are stupendous to see

To get more innovative ideas

Remove tension and think with a smiling face

Once we forget to smile

It will be very difficult to get it back

Smile, smile, smile

For a long and happy life

## RAINBOW EUCALYPTUS

A RAINBOW tree is DEFINITELY fantasy, isn't it?

Well, dear reader, you are, SURPRISINGLY WRONG!!!!

### BEAUTIFUL

This BEAUTIFUL tree has a "colour splotchy" trunk. Mostly found in the rainforests of Philippines, Indonesia and New Guinea! This makes it the ONLY EUCALYPTUS plant that extends to the Northern Hemisphere and to thrive in a rainforest! You MUST definitely visit!!! These can grow to a COLOSSAL 250 ft !! That's taller than my apartment. Now, that was disappointing when I heard it. I wanted to buy seeds and grow them. It was later that I found out that the 250 ft monsters only grow in the rainforest, and you can grow them in your backyard and they won't be 40 - 50 times taller than you! :) But if you do this, you have to make sure:

Give them as much water as possible - they NEED to be VERY, VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY,VERY hydrated.

They are REALLY sensitive to the cold. Though, you don't have to REALLY be worried about it in India, we have practically year - long Summer. Woo-Hoo!!

Do NOT keep them in pots, it's much better to keep them ON THE GROUND!!

They do not want shade at all, give them the Sun & you'll have FUN!!

## COLOURFUL

As mentioned, they are known for their RAINBOW trunks, but there's got to be a way to reach that stage...

Here's how:

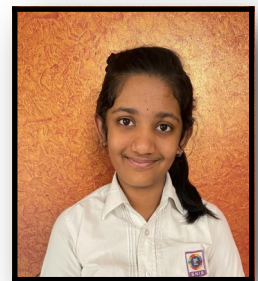

As they age, RAINBOW EUCALYPTUS,

shed their brown bark, revealing a bright green inner bark. As time passes, this green

turns into patches of various other colours, due to exposure to air! Then, gradually, it turns brown again and the cycle just repeats! They, by many, are considered the most beautiful plants in the world....

~Sudiksha Gouda

Grade 5

# Flamingo

The Flamingo is a beautiful pink wading bird. There are actually 6 different species of Flamingos. They are the Greater Flamingo, Lesser Flamingo, American Flamingo etc. My favourite type is the American Flamingo. It has a scientific name called *Phoenicopterus ruber*. It is pink in colour, they're feathers are usually pinkish red. They grow as tall as 3 to 5 feet tall and weigh around 5 to 6 pounds.

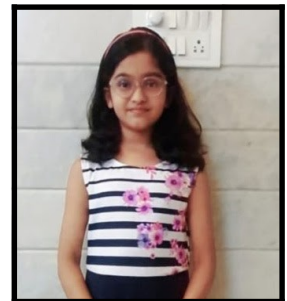

The males are generally slightly larger than the females. They have pink legs, a pink and white bill with a black tip. The American Flamingo is the only one that lives in the wild in North America. It lives on many Caribbean islands such as the Bahamas and Cuba. It also lives in northern South America, the Galapagos Islands in the Pacific ocean.

Flamingos live in low level water places such as lagoons or lakes. They like to wade around in the water searching for food. They are social and sometimes go in a large group of members like 10,000 birds. The Flamingos get most of their food by filtering out the mud and water in their bills to eat insects and crustaceans like shrimp. They get their pink coloring from the pigment in their food, Carotenoid. Although we mostly think of Flamingos wading in the water, they can fly as well.

They have to run to gather speed before they can take off and they usually fly in flocks. In the cold weather Flamingos can keep one leg next to their body helping it to stay warm.

Flamingos are one of the longest living birds, often living up to 40 years old. For these reasons and many more I am in fond of this beautiful pink bird, Flamingo.

## Angels Without Wings

These words are for our teachers  
They are the most caring of all the creatures  
They put in so much hard work  
But we never appreciate their art work  
All that I have desired and the life skills I have acquired  
Is because of my teachers who have inspired  
There is not a single teacher who is not dedicated  
And that is the one quality that always keeps me motivated  
Through their love we rose  
They don't have a cape, but still our super heroes.

*By Naiara Kaitlyn*  
*Grade 5*

## Thomas Jefferson

Thomas Jefferson was born in Shadwell, Virginia, United States, on 13 April 1743. His parents were John Wayles and Jane Randolph. His father was a lawyer, planter and a slave trader and his mother came from a wealthy family, which claimed descent from the kings of Scotland and England.

Jefferson had nine siblings and an adoptive sibling. He went to college at William & Mary in Virginia. Jefferson became a lawyer in 1767. He got married to his cousin Martha Wayles Skelton in 1772. They had six children. He got married again to Sally Heming, they had six children but only four of them survived into adulthood.

Thomas became a member of the Virginia House of Burgesses in 1769. He became president on March 4, 1801 until March 4, 1809. Thomas assumed the post after defeating president John Adams in the 1800 presidential election. He reduced taxes, government spending, and the national debt, and repealed sedition acts.

Thomas Jefferson became sick in 1825 and finally passed away on 4 July 1826. He is remembered even today as the author of the Declaration of American Independence, a document that announced the separation of 13 North American British colonies from Great Britain.

*Grade 4*

# Eels

Eel is a type of fish which looks like a snake. They have long, narrow bodies with long dorsal, and anal fins. Most eels have no scales. They belong to the order Anguilliformes. There are more than 800 species of eels. Eels live in both saltwater and freshwater.

I know you are so excited to know about it's appearance, right? The colour of an eel is muddy brown and olive brown above. The eel's backbone is made up of over 100 vertebrae which makes it very flexible. Their length ranges from 5cm in the one jawed eel to 4m in the slender giant moray. The shape is elongated with a laterally compressed body. It is similar to a snake while looking. The weight of the adult eels ranges from 30g to 25kg. Eels have gills and very sharp teeth.

Eels are found in Japan, Korea, South America, China and Taiwan. If you want to see eels you can visit any of these countries. Japanese will eat eels in their regular diet. The eel must be cooked thoroughly because its blood is toxic.

Well, you may wonder how long they can live? I will answer it right away. As they live in our century (20 - 21st) We knew them well. Average life span expected for these species is usually 10 - 20 years. Most eels hide and live in caves and rock crevices. They also burrow in the sand. These behaviours allow them to surprise and attack their prey. Some eels will actually chase their prey. The rocks also provide protection for the eel.

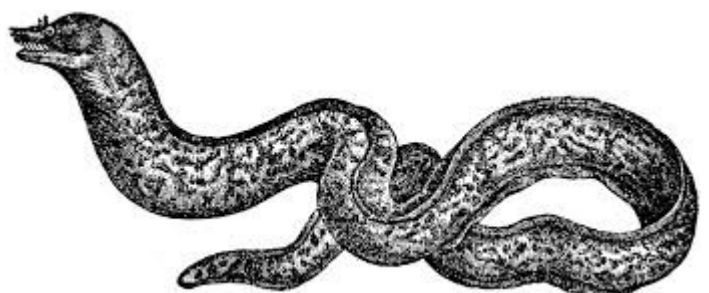

The electric eel is a South American freshwater fish found mainly in the Amazon river basin. The electric charge is produced by special organs along the sides of the eel's body. Their bodies contain electric organs with about 6,000 specialized cells called electrocytes that store power like tiny batteries. The electric discharge from an electric eel can be stronger than 500 volts. The eel uses the electric charge against its predators and to catch its prey. They have the power to kill humans like us or to stun a horse with their electricity.

Eels are very unique while comparing to the other fishes. Their dorsal and anal fins are fused with the caudal fin, forming a single ribbon, which is running along their full body. Eels swim by generating waves which travel their full body length. Some species of eels travel up to 4,000 miles to breed. This journey can take the eel over seven months to finish. While on the journey, the eel doesn't eat anything. After the eel breeds, it dies. It takes a young eel three years to become an adult.

Eels are one of the most amazing creatures in the world. It has so many unique features like its structure, its style of catching prey, its breeding style, etc. An unbelievable thing that I felt about eels is that, it can discharge electricity more than 500 volts and it is enough to kill a human.

Did you know .....

## 5 Facts about lions

### 5 facts about Lions

- Lions are the only cats that roar in groups.
- Female lions are the main hunters.
- A lion's roar can be heard up to 8 kms away.
- Lions can get their water from the plants.
- Most of the wild lions live in Africa, but one small population lives in Gir Forest National Park in Gujarat in India.

## SNIS, My School

My school's name is Sharanya Narayani International School. It is near Hoskote in Bangalore.

My school is great and very popular in Bangalore. I feel proud to be part of SNIS. I love SNIS because it is very cool and friendly culture and the teachers are very understanding. They are also very loving and kind. SNIS is also a very creative school. We can express our feelings freely. That is one of the main reasons why I love SNIS so much.

My school building is huge and it looks beautiful. There is a small, beautiful temple near our entry gate. There is a huge playground where we play many games like football, cricket, basketball, volleyball and kabaddi. There are many indoor and outdoor clubs for Archery, badminton, table tennis, lawn tennis, swimming pool, dance, music and art. There are some physical training clubs where our coaches train us for various tournaments. There are some classes for juniors like ICT, robotics and meditation. There is a huge library which is loaded with several books and magazines. There is big cafeteria. They make so many tasty dishes in which my favourite is chicken biryani. Our school Principal's name is Ms. Lakshmi Reddy. Our coordinator is Mr. Kapil Mehrotra. Our class teachers are Ms Shenoba and Ms Sheba. There are so many other teachers for different subjects. Our teachers are hard working, supportive and kind. They take lots of efforts to teach us. There are twenty three students in our class. We all play and learn together.

Our school conducts various activities like competitions, presentations, art and craft, making models and conducting experiments. We have an annual day and sports day programs. We all participate in these programs. In a year our school takes us to several educational and fun field trips.

I love my school and I feel proud to be a part of it. Finally, I would like to thank my school, for being one of the best schools in Bangalore. A big thank you to my wonderful teachers for their knowledge and expertise and for taking on the challenge of teaching all of us with grace, humour and enthusiasm

*Ira Karthik Naig*

## God's Signature

After every rain, God puts his graceful signatures on the sky in the form of a rainbow!

It seems like an ornament of the sky. In reality, it is one of nature's greatest optical phenomenon. Rainbow is a band of long and wide seven colours - red, green, blue, orange, indigo, yellow, and violet. This lovely and colourful appearance in the sky is very soothing to the eyes and a source of excitement for children.

It's formation can be explained scientifically. When sun rays strike the raindrops, some of the sunlight is reflected and the rest is refracted. The white light splits into different colours of VIBGYOR. A rainbow appears to cover a part of the sky but in fact it is a full circle! If we fly high enough, we will be able to see it as a

circle. Though rainbow is a natural phenomenon we can learn something from it.

"Take your share of hardships and never do complain. For if you want the rainbow you must also take the rain".

*Sugamya K.R*  
*Grade 4*

## Reflection

It was a pleasant evening, it was drizzling. Tiny, tiny droplets were falling everywhere. I felt like nature was calling me to enjoy the chilled cool air.

Tiny droplets on the leaves and flowers were twinkling like stars. The grass was studded with shiny droplets and was attracting everyone with its dazzling green colour.

My friends and I planned to go cycling to enjoy the blissful sunset near the magnificent river close to my house. We took our stylish cycles and raced down the slope, laughing and teasing each other.

The road was empty, it was getting dark, both the sides of the roads were filled with huge trees. It was a wonderful sight! With the cool breeze hitting our face, my friends and I started racing each other.

We reached near the river; the river was vast.

We sat on the wet green grass, looking at the sun.

The sun looked calm and was about to go down and hide itself from us. The colourful rays of sun had painted every corner of the sky, it was a mix of different colours, light yellow, purple, light pink, some red and dark orange.

It was a treat to watch the sun go down. I jumped up high pretending to touch the sun and fell into the water. My friends tried to imitate me and jumped high like me and fell inside the water as well.

The water was cold and refreshing. We laughed, screamed and splashed around!

We had fun.

It was a memorable day; I remember the reflection of nature in the river. I would see the dark shadow of trees, the gorgeous brush strokes of the setting sun.

The colourful rays of sunset made me dream that night, it was a reflection of nature. I was flying up high like a fearless bird.

# All work No pay

In our country farmers are one of the most economically weak section of the society. I always looked at them and wondered about all their hard work but no less income. I discussed this with my Dad when I was at our farm. This is what I understood.

The main problem with farming is that the farmers never get the true value for their produce. They do all the hard work but they have to depend on the agents to sell their produce. As they are busy working in the farm they cannot take their produce directly to the customers, they have to depend on the agents. The agents who connect the farmers and the customers make most of the money.

We are progressing as a digital country, we have Ola and Uber to connect the commuters and travel options, we have Swiggy and Zomato connecting the food lovers and the restaurants, we have Air BNB and OYO connecting the travellers and the accommodation, Facebook and Instagram connecting billions across the world, all this happen in a flash over a digital platform. For some strange unknown reason, we still don't have a platform connecting the farmer and the consumer. This I think is the main reason why farmers are still suffering economically.

We being a country of farmers, I hope and wish, in the near future, there will be a platform connecting the farmer and the consumer. Only then we can call ourselves a truly digital India. This should challenge our young digital computer-savvy generation with an opportunity to work and address the plight of the farmer.

# A Storm In My Hot Chocolate Cup?

Pitter-Patter! Pitter-Patter! Whoosh....Whoosh... Pitter-Patter!  
The rain poured down incessantly over my bedroom window. Heavens had opened  
today and I was enjoying my favourite hot chocolate.  
Suddenly, a figure appeared in a dark-green cloak.  
I wiped the window to look clearly.  
It disappeared!  
I forgot about the delicious drink.  
The figure's presence remained in my mind.  
Curiosity caught hold of me and I googled about it.  
But no results were found.  
Being adventurous, I also searched how beings look like in the witch castle.  
Still no results!  
Then, after a day or two, I got busy. My exams were approaching and I had to prepare.  
And one day, I saw it again.  
It was raining like before.  
I immediately called my Dad. He looked carefully at his shining, green cloak and said  
staggeringly,  
"This is a rain wizard!"

# On Music Land

Max and Sara were best friends. One day while they were going to school they saw a time travel machine it was magical and it was glowing. Only they could see it. They went inside the time travel machine, when they stepped in, they heard loud funny noises.

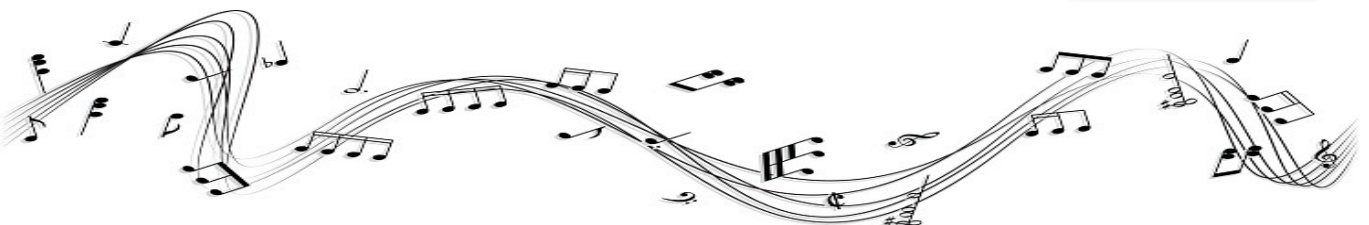

Inside there were horns, whistles, flutes and drum bottles. Toot! tweet-tweet! clang clang! bang bang! Also, when they stepped inside, the shiny bright sun's rays fell gently on their faces. They saw sparkly music instruments, they were in a music world, filled with colourful music tree, even music garbage cans, and everything else seemed so musical.

They asked themselves are we insane, ha-ha the place was amazing. Max and Sara shouted loudly they asked the funny instruments why they had got them there. "We have got you guys to help us", they sang. Sara asked them what help they needed, then the instruments told us their story.....

"Long long ago, all of us were happy. There was a person called Nick he was wicked". Max asked, "Who is Nick?" "He was our friend but he started becoming bad to people and he started making the music band his workers and slaves. We tried our best to get him away he was too powerful, nobody could rule him or advice him." "Oh no!", Max and Sara said. "I have a plan", Sara said with sudden happiness. She asked them if Nick was scared of monsters, they said yes very scared. "You all can come together to transform into a Musical monster. A huge Musical Transformer can scare him away. Let's do it!"

Now the musical transformer was ready, all the musical instruments stuck together and formed the transformer, with a all instruments playing loudly, they went near Nick and scared him away. Nick disappeared as quick as a lightning. The instruments thanked Sara and Max and played some awesome rock band music, everyone had fun and loved the music.

# Progression Of Cavemen

Homes under Trees  
Families in caves  
Hunting of animal  
Lasted eons away

One morning I made fire  
It kept me away from fear  
So, I showed another being  
that it chased away the bear

Homes in timber  
Made me think better  
I soon thought of  
Working with soil  
That required tools, axe and blades

One morning I made wheel  
Started looming in straw and thread  
Which made me want to trade  
I soon resolved,  
That to make a better tomorrow  
I have to make a better today

*By Sugamya K.R*

## Holiday Homework Ugh !

It was spring break , the only thing in home work which was left was a paper of Math sums , word problems in one single sheet . I know this thing was totally hard as well as tricky , because it was Multiplication . The air next to me was getting hot , I took deep breath and rubbed my eyes .

Last week, 'I think I should not do the homework today' , I had thought I can postpone this , 'but what if I don't complete it because this is tricky , but why ? Oh God! I'm going to do it late' , 'what is the hurry in this uh.....', said another thought in my head 'But this was wrong I must have finished it that day !'

But then, I still did not, I watched movies and played with my friends all day long , and I didn't think or notice about my homework , but I enjoyed a lot , and watching T.V was the best part , I was so lazy to complete my pending homework.

I woke up and saw the calendar I had one week left for the nice cool spring break to finish, I was sad . I needed more days to play and enjoy , but this was so boring, I thought about the homework but I decided again not to do the it.

My days spent in one week, I tried to live in one day , I tried to expand and I continuously played happily and I was fully bored after I played all the games, then I watched kids movies, which was very funny and I loved watching " Hotel Transylvania " I always like to watch it , this time I was seeing part two, the summer vacation that the Dracula spent .

I'm the one who was so lazy and relaxed, 'I think my friends are done doing all their homework, Mmm.....

But I still didn't like to do it . It was very bad that I did that but what can I do I couldn't turn back time .....

Then my mood was very bad, because my friend went somewhere for a vacation , and it was so boring as if I'm sitting all alone in the dark woods. Now it was the last day for doing the homework, I mean last day of my holidays ! Now this was totally hard and also when I checked the calendar it was already night time, now It was totally tough , I must finish my homework quickly , I mean as fast as I could !

Now I took a deep breath and made myself calm , I read the instructions it said :

(Instructions: please solve these multiplication sums)

...now I solved the first one and then second I patiently did all , now I turned the paper back side and read the instructions it said ; (finish these word problems these are addition word problems)

Now as I did the sums of multiplication . I patiently did all . It was a bit hard but I kept on trying as I thought I'm the turtle who won the race patiently .

Finally was done, I then kept the worksheet in my folder and packed my bag and then said bye to my tough home work , and knew I was free , then my mom shouted , 'are you done with you homework ?' I answered yes , mom again said ; 'if you're done go to bed and sleep , remember you have school tomorrow!' I replied ; that I remembered , then I ran towards my bed and rested, in there It was so warm and cosy.

Then I closed my eyes with happiness and was ready for school the next day and also excited !

*Grade 4*

## I'm from the Neolithic Era

One day I was feeling cold and hungry as I could not hunt. It was raining so I went back to the cave. I was feeling very sad and trying to sleep. Suddenly, I saw a fire from far away. I saw some people were cooking and laughing. So I went there to visit them.

I was surprised to see their settlement. I saw the people were living in homes and they were eating different kinds of grains. They told me that they could grow their own food. I was surprised to see how they learned to grow crops. They told me that they did experiments to know about the crops and how they learned to cook them with fire.

I saw that they were having some pets like cows, goats, dogs and sheep for domestication. They were getting milk from cattle and they were drinking and using milk for cooking.

I saw that they were making pots and using them to cook and eat. I was amazed to see their creativity.

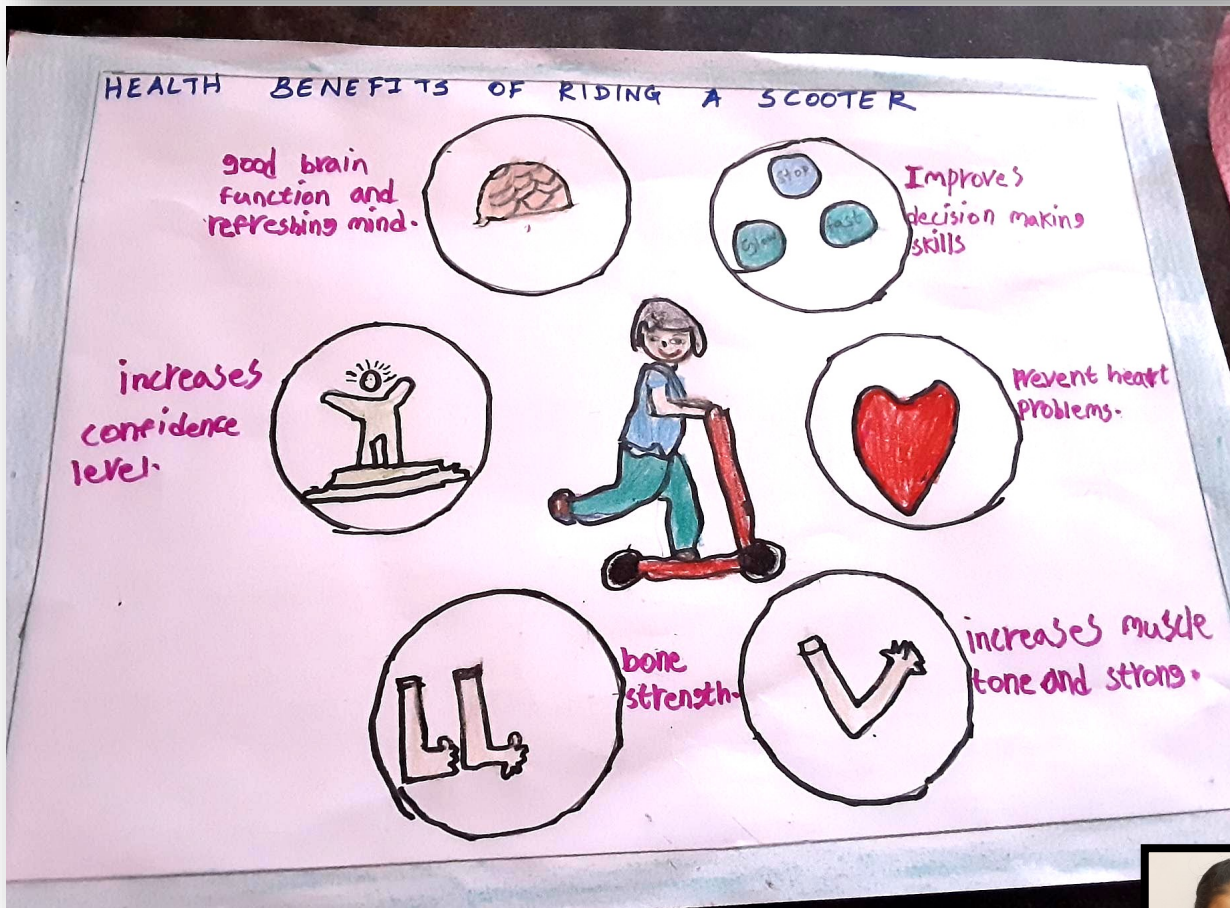

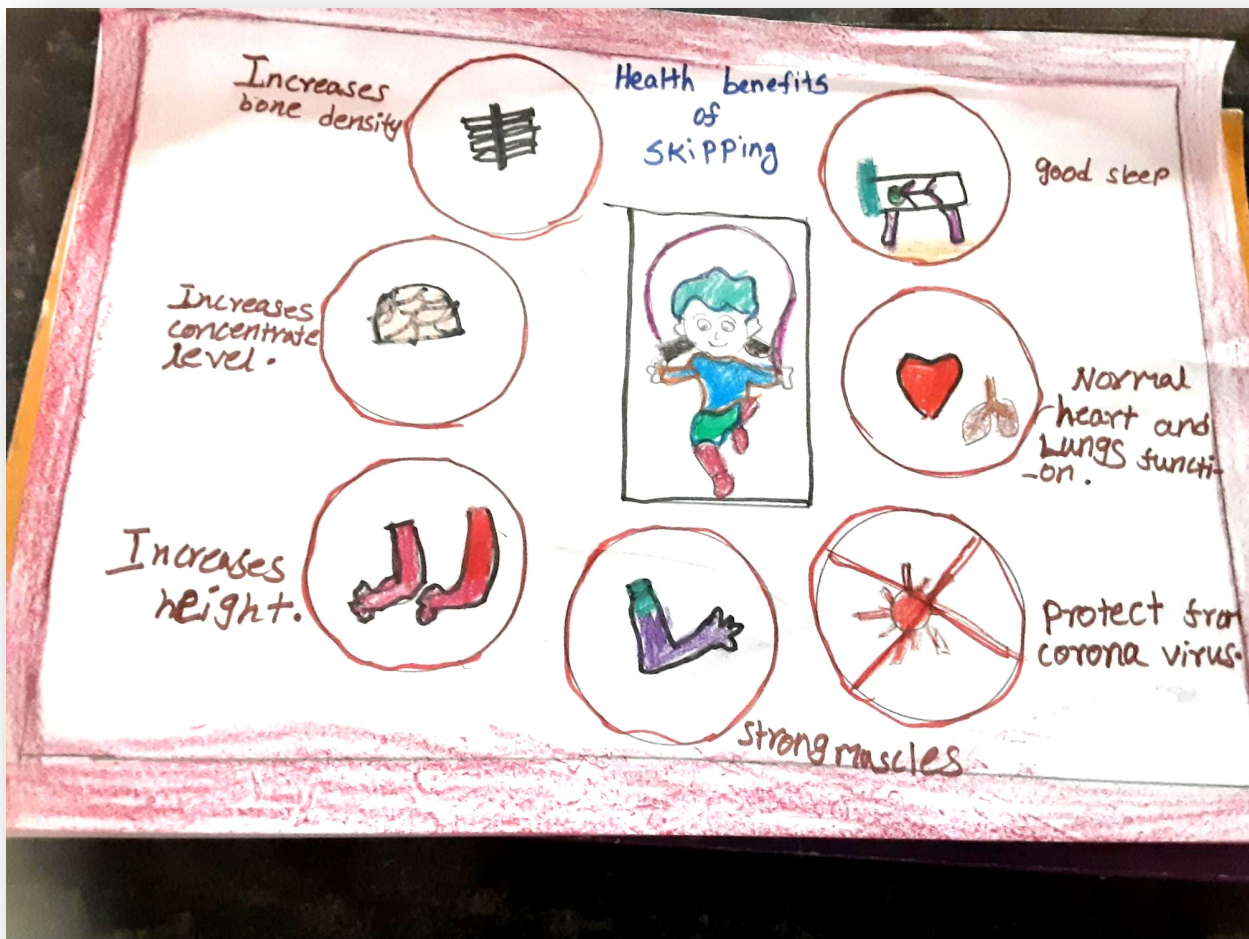

They were facing lots of problems to do transportation so I gave them an idea to use the logs of wood, the wheel apparently was born!

I saw that they were able to make more advanced tools. Those tools were much better than mine as they were more sharp and they could hunt more easily. So I thought, that I should settle with them and work on more developments.

Now I can happily say I'm from the Neolithic era!

## A Camping Trip

Once upon a time there lived a mother and a father they had 2 children Sunil and Avanthika. One day they decided to go to camp in Bandipur on Saturday. They were eager to go there. So the day came soon and the family packed up and went. As soon as they reached, the kids started playing and their parents started to cook. Soon it got too hot so the kids took out a summer pool and went in and started playing. At noon they had lunch and then slept. When they woke up, it was evening so they set up the tent. While setting the tent up a strong wind blew the tent away. The children followed the wind and then came up on a wonderful spot. They went to their parents and described the wonderful spot and their parents agreed to go there so they went saying “hurrah! woohoo!”. When they reached home they said it was the most exciting camp they ever had.

## MY CAMP NIGHT

Once there lived 2 children with their mother. They went camping in the jungle. They took their barbecue set, tub ,toys and many other things . In the jungle they chose a beautiful spot with lots of plants and bushes around. They blew up their bathtub and filled it with water and started playing. While they were playing their mother was cooking snacks to eat.

While everybody was busy, they heard a loud Roar!.. All of them got scared .They left everything and hid in a safe spot. Then a team of hunters came and caught the lion in a net. Then they put the lion in a big van and took him to the Zoo.

The kids saw the lion crying and told the hunters to set him free but they refused and took the lion to the Zoo. The kids followed him secretly and set the lion free.

They went back home but the lion followed them to thank the kids. After a couple of hours the lion went back to the jungle and the kids came back home. All of them lived happily ever after.

## A Day at the Carnival

The carnival is so much fun and exciting. It looks noisy and crazy. It was rainy today so we couldn't go. But we went yesterday and it was sunny.

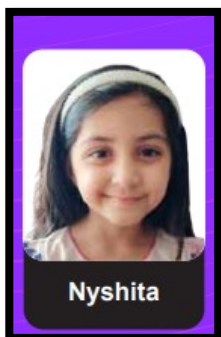

The big mirrors made us look funny. Juggler made us laugh when he dropped the eggs on his head.

The carnival was filled with joy and laughter. There are Games, rides, and shows like hit with the Hammer, arcades, Ferris wheels, roller coasters, and animal stunts in tents.

The food at the carnival was delicious. You get all sorts of food like Chole Bhature, Pav Bhaji, Chaat, Pani Puri, popcorn, pizza, and drinks such as orangeade lemonade and Rooh Afza.

We should use trash cans in the carnival to keep the earth clean and we will have more space to roam around.

We had so much fun yesterday at the carnival.

## Weekend Celebration

Dear put your toys away  
Do help me in a little way.  
Your daddy has to wash the car  
We have to travel so far.  
Take the bucket and hose  
Get up and go on your toes.  
Granny is turning fifty-eight  
I'm happy, I can't wait.  
You must help me bake a cake  
We will have a party nearby a lake.

## Birthday Musings

O what a wonderful day I say  
with my face shining bright and the sky looking light  
I saw my parents awake making a yummy chocolate cake  
I see them in the kitchen and I tell them to stand in first jazz position  
I asked them why they were making it  
I ate a tiny bit it tasted horrible at first  
they said "don't eat it, it is terrible"  
I ran out of the kitchen and started doing my homework which was addition  
and after I finished  
I did some annotation on the laptop then  
I looked at the crop I planted in my garden on my birthday.

## My Birthday Party

It was my birthday.

I invited all my friends to my birthday party.

The hall was decorated with big colourful balloons, flowers and streamers.

My friends loved the yummy chocolate cake.

The cupcake was delicious with different flavours.

On my birthday there was lots of yummy food. The juice was sweet tasty  
and refreshing

My friends were wearing colourful triangular birthday caps.

There was delicious sweet and syrupy Gummy Bears on the table

14 candles were lit on the birthday cake.

My friends were very happy and enjoyed the party
