The power of play based learning

by Ms Manisha Mukutmani - EYP 2 Homeroom teacher

Imagine walking into a classroom alive with laughter and discovery—a place where children's creativity knows no bounds. Tiny hands eagerly stack colourful blocks into towering castles, groups of friends embark on thrilling pretend adventures as astronauts or chefs, and bright splashes of paint dance across little fingers. This is not just play; it's a vibrant world where learning bursts forth with every giggle and every "aha!" moment.

Play-based learning is a dynamic approach that transforms early education into an adventure packed with joy and exploration. It's where problem-solving meets imagination, where social skills flourish through collaboration, and where emotional growth is nurtured through expressive, safe play spaces. As children move, create, and interact, they develop critical thinking, empathy, and resilience—all wrapped in the fun of play.

What makes this approach so powerful is its holistic impact. Play doesn't just build academic skills; it strengthens the whole child. Physical activities boost coordination and strength, while fine motor tasks refine dexterity. Social play hones communication and teamwork, and imaginative games spark creativity and self-confidence. It's learning that feels effortless because it springs naturally from a child's desire to explore and connect.

More than a teaching technique, play is a celebration of life's wonder and possibility. By embracing the power of play, we equip children not just with knowledge, but with confidence, creativity, and a lifelong passion for learning. Every playful moment lays the foundation for a bright, inspiring future—one full of curiosity, resilience, and joy.

At SNIS, in Early years, play is the heart of learning. We at our school create a stimulating learning environment where children explore, inquire and make meaning through hands on experiences. Teachers design learning spaces that encourage free play, guided play, and inquiry-based activities that nurture creativity and curiosity. Materials are accessible so children can choose, experiment, and collaborate with peers. Daily routines include outdoor play, sensory exploration, role play, construction, and storytelling to support holistic development. We teachers observe and extend children's ideas, ensuring that play is purposeful, joyful, and connected to learning outcomes.

In conclusion, one can confidently say that play-based learning is a deeply impactful way for children to learn. When children are given freedom to explore, create and imagine, they develop skills that are quintessential to thrive in this complex world. By celebrating the play based learning, we are celebrating the child and childhood.

Events Highlights

PYP 3 Assembly

Our students presented a vibrant and meaningful assembly on Dussehra, celebrating the triumph of good over evil. Through a lively skit, students retold the story of the Ramayana conveying the values of courage, truth, and righteousness. The skit was followed by a dance performance celebrating the spirit of Dussehra, accompanied by traditional music and colorful costumes.

Events Highlights

PYP 5 Assembly

Our students presented an inspiring assembly on Dyslexia – Understanding Different Ways of Learning through a thoughtful skit, lively music, and expressive dance. The performance highlighted empathy, inclusion, and the message that every learner is unique, celebrating diverse strengths and promoting kindness within the school community.

Events Highlights

PYP 4 Assembly

PYP 4 students presented an inspiring assembly on Air Force Day, celebrating the courage, discipline, and dedication of our air warriors. Through songs, speeches, and a short skit, they highlighted the importance of the Indian Air Force in protecting our skies and serving the nation with pride and honour.

Events Highlights

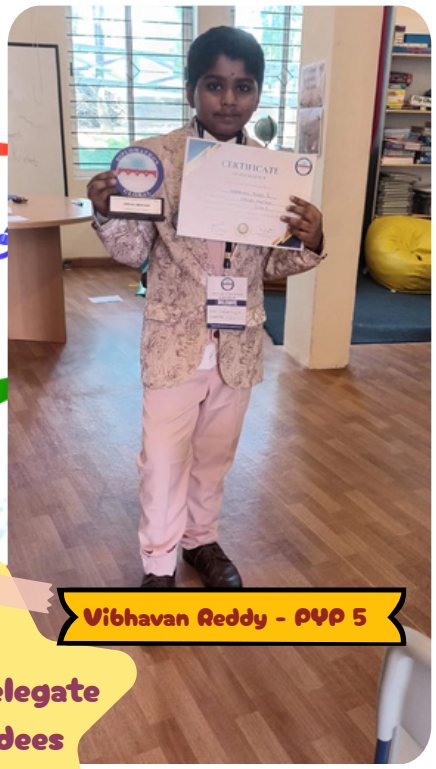

Diplomathon Conference

Our PYP 3-5 students participated with great enthusiasm in the Diplomathon MUN Conference, showcasing confidence, collaboration and strong communication skills. Representing various countries, they engaged thoughtfully in debates, shared well-researched perspectives and demonstrated exemplary leadership. Their ability to listen, analyse and articulate ideas clearly made them stand out throughout the sessions. We are proud of their dedication and the way they embodied the IB learner profile attributes, truly shining on this prestigious platform.

My Plant: Brahmi Creeper

BRAHMI CREEPER

Brahmi creeper is a small medicinal plant that grows close to the ground and spreads like a creeper. It is usually found in wet and shady places such as near ponds, rivers and and marshy land. The leaves are small, smooth and green and the flowers are mostly white with a little purple or light blue colour in the center. Brahmi is an important Plant in Ayurveda and has been used in India for many years. People believed that Brahmi helps to Improve memory and brain power, so it is known as a "Brain tonic." it also helps to reduce stress, keeps the mind calm. This plant is also good for hair and skin, and sometimes it is used for stomach problems. If we use Brahmi properly it keeps us healthy and smart. That is why Brahmi creeper is considered as very useful and special plant.

My visit to MVJ College

ARNIKA MVJ medical college

The exquisite field trip

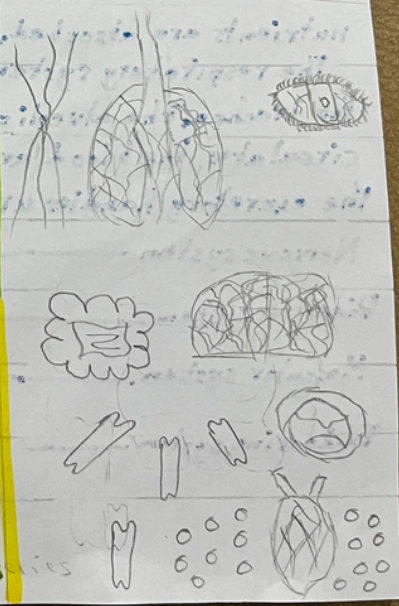

Our field trip was very interesting. We went to MVJ medical college. The learning outcome and metacognition was making the students to go more into biography research, and explore the unmonotonous human body systems and organs. When we went there, we met two doctors who were going to help us. First, we discussed about the human body, and the museum.

The museum

In the museum, there was a plethora amount of human body organs, that were used for show casing to students.

We saw many organs, here's the list of them:

- A human heart
- Tiny babies
- Types of skulls
- Brains
- Spinal cord
- Kidney
- Large intestine
- Pelvis
- Ureters
- Skeletons
- Ventricular cavity
- The real tongue
- Parts of the eye
- Sole
- Leg compartment
- Upper limb
- Lower limb
- Nerves, veins, arteries

Contd....

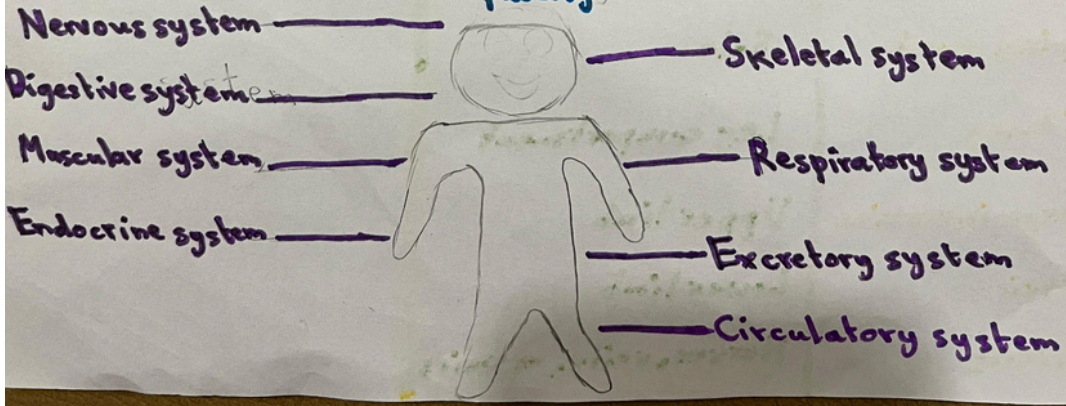

We saw many organs in the museum, but how do they work?

Amazing systems human body

The skeletal system is the system of bones, it helps us to move and many more. The muscular system has different muscles, without it, we can't be strong and integumentrical. The nervous system sends signals, the brain is the control center, the nerves send signals to the brain, the brain confirms and sends the signal to the spinal cord or sense organs.

The digestive system helps us to eat. The mouth, esophagus, and stomach, sends the food to the small intestine where the nutrients are absorbed, the one which throws waste is the large one.

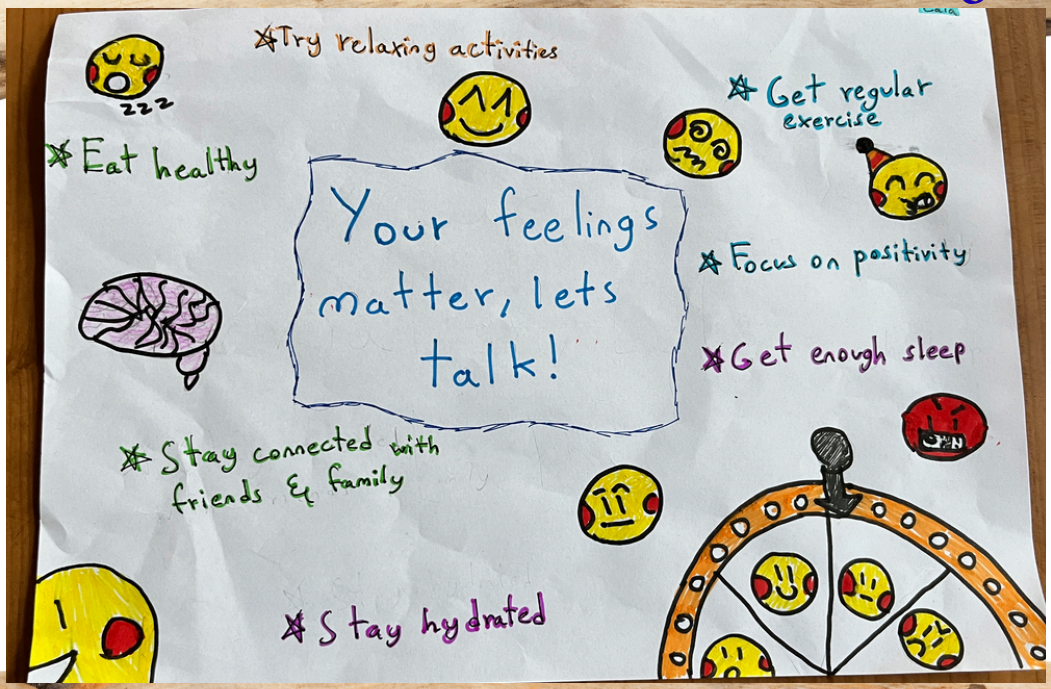

The respiratory system allows us to breathe. The air goes through the trachea, the alveoli stores it. The circulatory system circulates the blood around the body with the heart and blood. The excretory handles ureter negotiations, and endocrine handles puberty.

Caia Jacob Saraswathi - PYP 5A

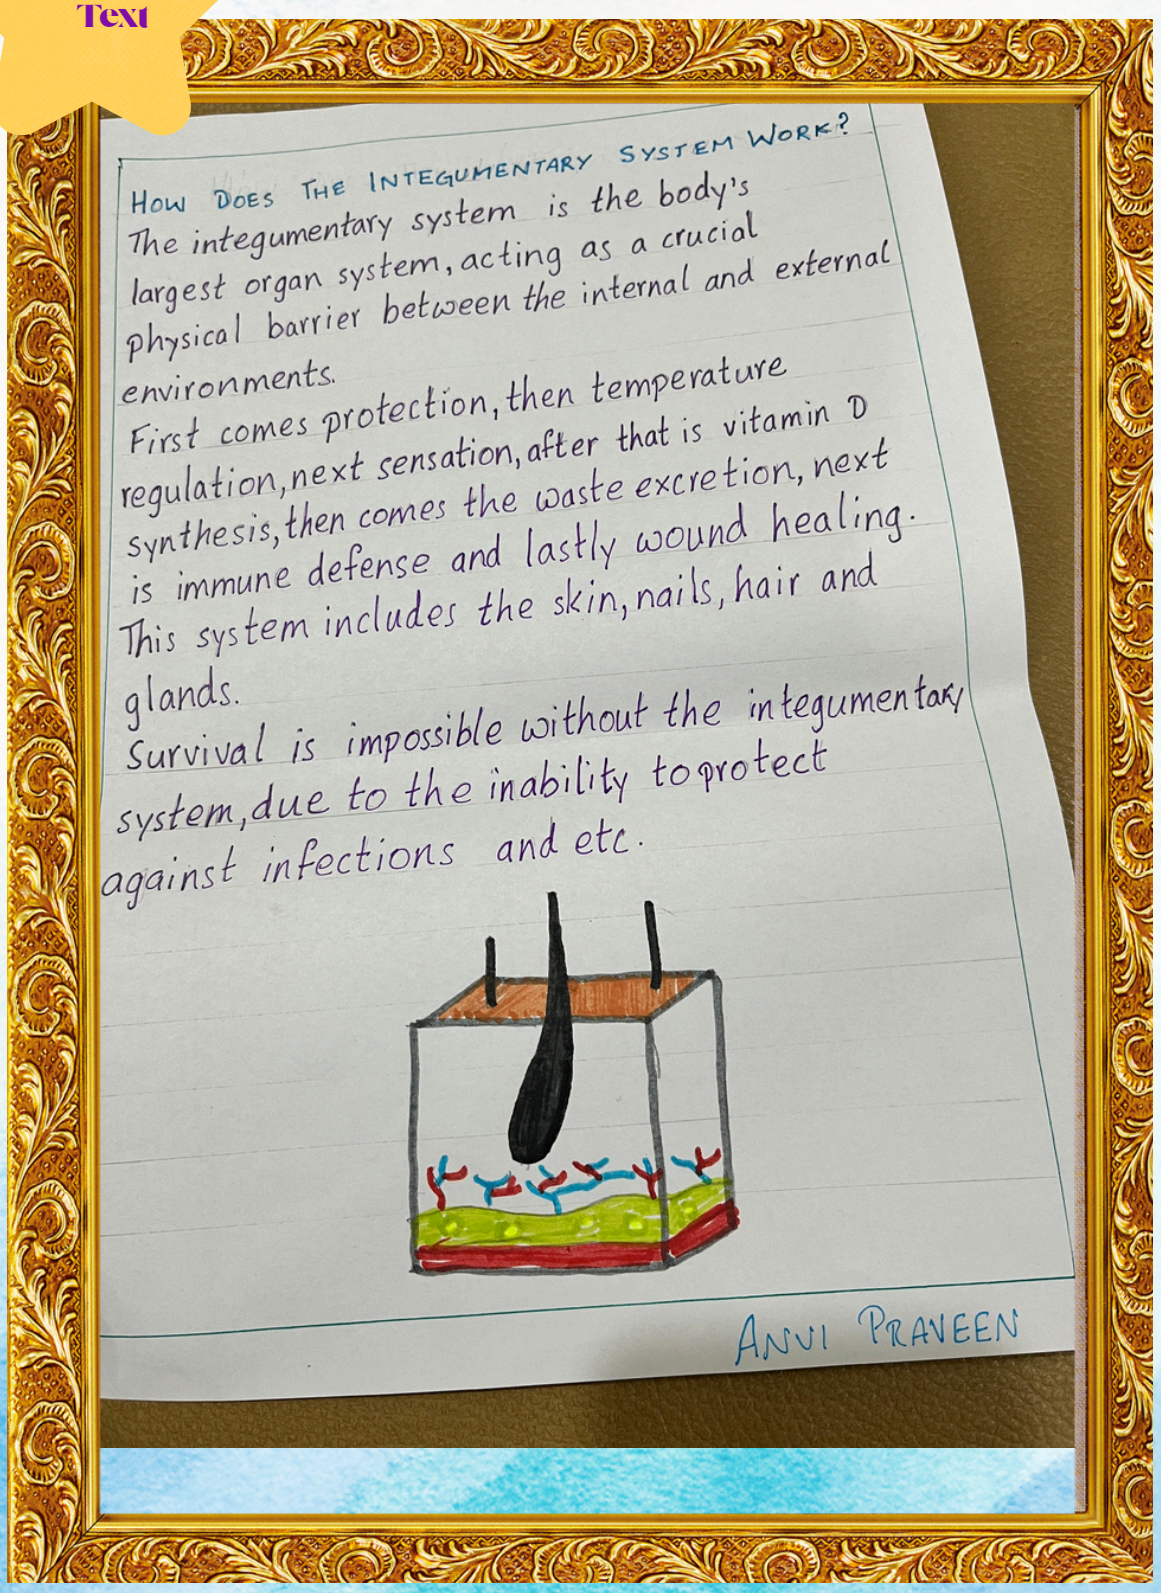

Poster: SDG 4 Good Health and Well Being

Anvi Praveen - PYP 5A

Explanatory Text

How Does The Integumentary System Work?

The integumentary system is the body's largest organ system, acting as a crucial physical barrier between the internal and external environments.

First comes protection, then temperature regulation, next sensation, after that is vitamin D synthesis, then comes the waste excretion, next is immune defense and lastly wound healing. This system includes the skin, nails, hair and glands.

Survival is impossible without the integumentary system, due to the inability to protect against infections and etc.

Benefits of yoga and meditation

The latest updates

Have you ever felt super stressed out about a big test? Or had so much energy that you couldn't sit still? Or just felt kind of grumpy for no reason? Guess what? There are two awesome, ancient activities that can help you with all those feelings and more: yoga and meditation.

They are like secret tools you can use anytime, anywhere, to make your body strong and your mind calm. They have been around for thousands of years, helping people feel better inside and out. It's like having a superpower that makes you healthy, focused, and happy. Let's dive into all the cool stuff they can do!

Contd.....

Part 1: What Is Yoga and Why Is It So Awesome?

Yoga is a special way of moving your body and learning how to breathe deeply at the same time. It's not a sport or a race; you don't have to be the best or the fastest. It's all about paying attention to your own body and how it feels.

When you do yoga, you get into different shapes called poses. You might stand like a strong "Warrior," bend like a "Downward Dog," or balance on one leg like a "Tree." This isn't just for fun—it does amazing things for your physical self.

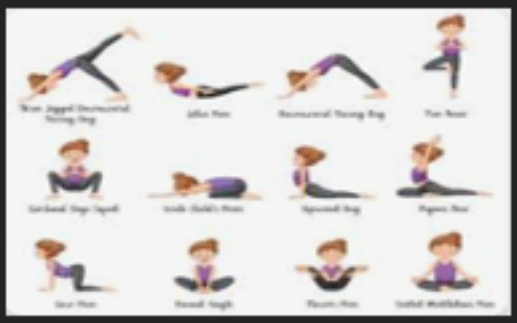

1. A Stronger, Super-Stretchy Body

When you hold those yoga poses, you use muscles that you might not use every day. This helps your muscles get stronger and helps your bones stay healthy as you grow.

Yoga is also famous for making you more flexible. Flexibility means your body is limber and can move easily. Being able to touch your toes easily, reach for things high up, or do cool stretches feels good. It also helps stop you from getting hurt when you play sports, run, or jump.

2. Amazing Balance Power

Many yoga poses ask you to balance, sometimes on one foot or in a funny shape. This trains your brain and your muscles to work together to keep you steady. Good balance is important for almost everything you do, like riding a bike, walking a wobbly log at the park, or even just carrying your lunch tray without spilling.

Part 3: The Power of Both

The coolest part is that yoga and meditation work hand-in-hand. Yoga is a moving meditation that gets your body all stretched out and ready. After your body is relaxed from yoga, it's much easier to sit still and quiet your mind for meditation.

You don't need to be a professional to start. You don't need a fancy studio or special clothes. You can do yoga poses in your living room and meditate in a quiet corner of your bedroom. There are tons of fun, easy-to-follow videos online made just for kids.

By adding a little bit of yoga and meditation to your day, even for just five or ten minutes, you are giving yourself the gift of a healthy body and a happy, calm mind. They are simple, fun ways to feel your absolute best every single day and give you superpowers for life

Part 2: What Is Meditation and Why Is It Magic for Your Mind?

Meditation is different from yoga. It's all about sitting still and giving your brain a much-needed break. Our brains are always super busy, thinking about what we had for breakfast, what we have to do next, a song we heard on the radio, and a million other things. Meditation helps the brain slow way down.

You can meditate by just sitting quietly and focusing on one simple thing, like the feeling of your breath going in and out, the gentle sound of a bell, or even a nice, calm word you repeat quietly in your head.

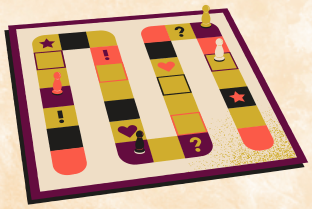

1. Bye-Bye, Stress and Worry

This is one of the biggest benefits. Meditation helps you let go of that tight, nervous feeling in your chest or tummy you get when you're worried about a big math test, a project, or even a problem with a friend.

When you meditate, you train your mind to focus on the present moment, right now. You stop worrying about what might happen later. This helps calm your nerves and makes those "worry monsters" much, much smaller.

Monalisa L- PYP 5B

Poem

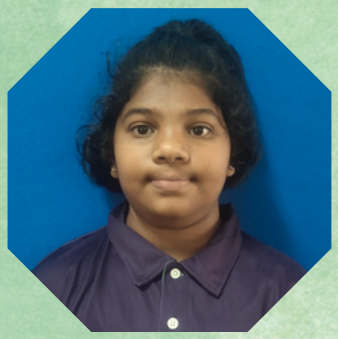

Task 1: Rhyming poem on circulatory System (Heart)

FROM HEART TO HEART

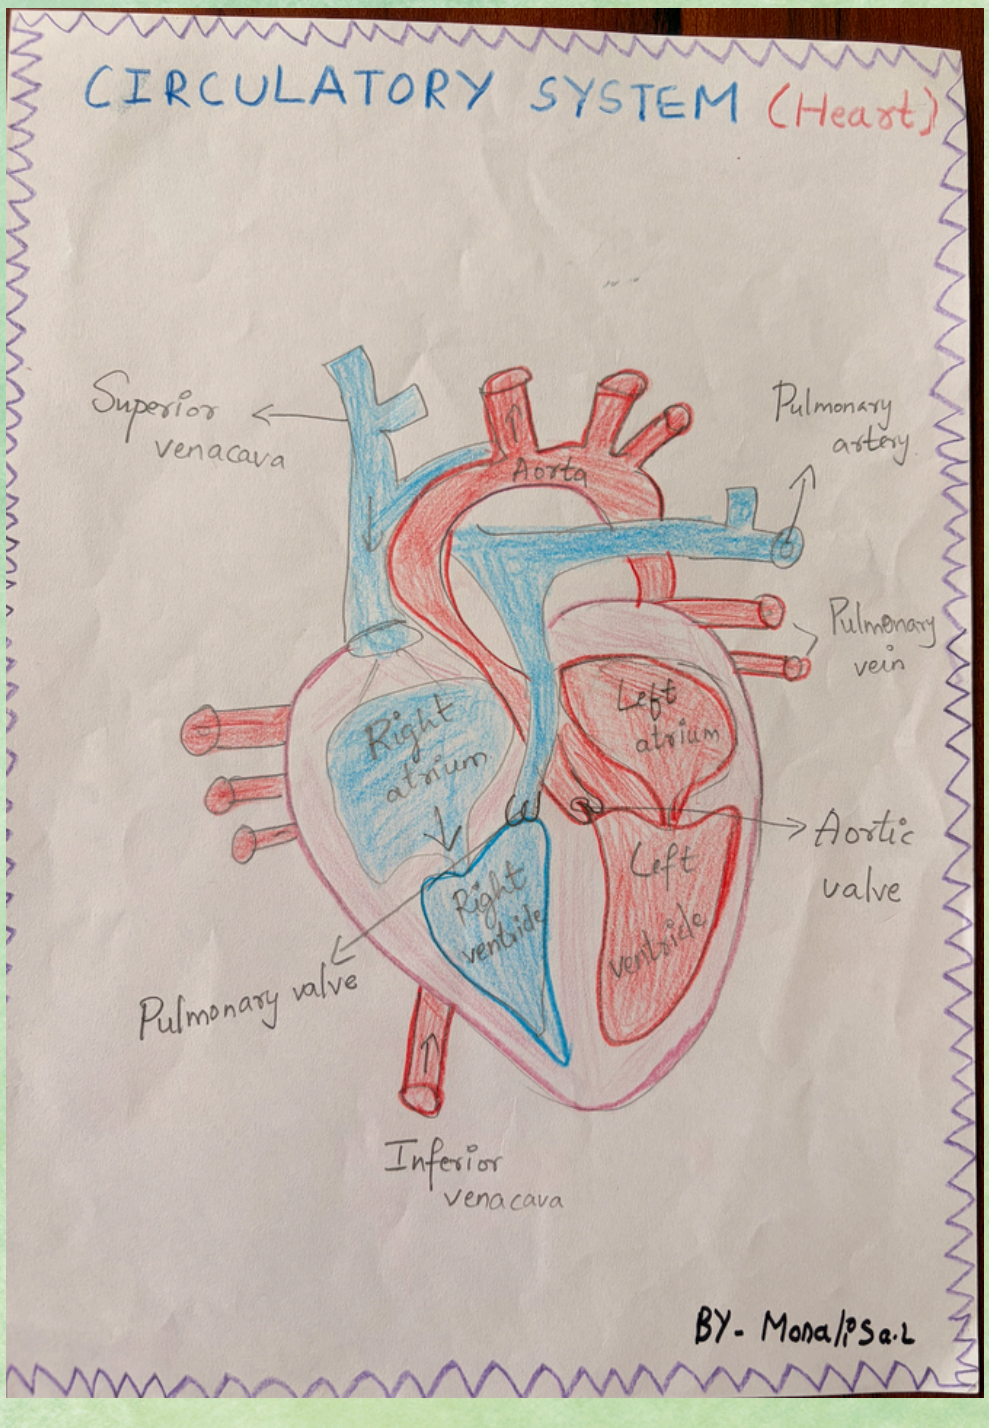

Home is the heart, the centermost core
Alive in your chest with a critical chore
Pumping away like the beat of a drum
And moving the blood from your foot to your thumb.
Circulation begins where the arteries start
By pushing the blood cells away from the heart
Down the aorta & into the flow
Delivering oxygen needed below.
A system of arteries branching throughout
To nourish the organs around & about
Till the blood finally reaches the furthest domains
Where capillaries merge & converge into veins.
Returning by way of the great vena cava
Coming in thick like a rush of hot lava
Back to the center, but oxygen poor
Time for a breath of fresh air to restore.
Approaching the lungs at a regular pace
Here an exchanging of gases takes place
From the windpipe comes oxygen deeply inhaled
While carbon dioxide is slowly exhaled.
One vessel opened another constricted
Constantly moving three quarts of liquid
The cycle continues the blood runs its course
Endlessly pulsing with bodily force.

The Mighty Heart: Engine of Life

Poem on Nervous System

Vrinda Gupta- PYP 5 B

The Nervous System

The boss is the brain,
The messenger is the spinal cord,
The carriers are the nerves!
These are the parts of
The Nervous System.

Ouch! You touch a hot pot.
Wow! You take your hand back.
This is how your brain plays it's game.
Try to remember a name.
Your cerebrum plays it's game.

Keeping your nervous system healthy
is very necessary!
Sleep to make your brain unstopable.
Have nutrients to be capable.

Did you know, your brain is more active while sleeping!
Your brain boosts memory after exercising!
There're more than 86 million neurons in a body!
And this is all about The
Nervous System!

Narrative

Aaron's Music

Once upon a time there lived an optimistic boy named Aaron. Aaron enjoyed playing music and wanted to be the world's best Pop star. When he was 11, he got his first keytar, It was too small for him, but he loved it so much that he wanted to buy an original Sherlock soft key piano, but he couldn't afford it, so he played on an air piano which he whiz popped. His favorite food was Pennsylvanian burger which was extremely delicious. More importantly he could play all the instruments except the saxophone. He loved to create extravaganza music. When he played, his hair was jazzy.

Everybody in town came to hear this iconic music, so he decided to join Porchfest. It was a singing competition where people designed their porches exhilarating the singers to sing better. Aaron practiced every day as if his life depended on it. His sister, Erin, who was a methodical person always would be there for him so she would become his advisor. Aaron was so alluring that the whole town came to watch him at Porchfest. Then he realized, why not attend bigger singing competitions. And later he attended the SSS (Secret Singing Songs) there he played Phenomenal one of his most flamboyant songs yet he was he was he won the SSS day Justin Bieber came to his house to call him to play play with him in the in New Jersey so Aaron played Aaron agreed but then Justin asked Aaron to be his new heir and Aaron Accepted.

When Justin Bieber died, Aaron took over. Aaron was complaining about a smart thief who stole his trophy of best singer in the world which he kept safely in a safe house. *"So how did he get it"* Aaron asked himself because only he and Justin Bieber knew the experimental password which was impossible to guess by anyone else and an idea stuck in his mind.

He went to Justin's grave and dug it up but found nothing, no corpse. So, he got it, what if he was not even dead. Before his so-called death, he made a song that would convince all his fans to look for Justin in a logical way. The song was named *"Search all"* and his fans went to search for Justin.

Aaron's fans found Justin in the forest. They caught him and brought him to Aaron. Aaron told Justin to give back the trophy, but Justin denied. So, Aaron dragged him to solitude till he gave his trophy back. But Justin died in solitude and never gave the trophy back.

Narrative writing

THE LONG WALK TO A NEW LIFE

Meera lived in a small village where her family had fished for generations. But rising sea levels and storms made their life very challenging. One year a powerful cyclone destroyed their home and swept away their boats. With no way to survive, her parents made the difficult choice to migrate to a city.

The journey was tiring. They carried only a few bags of clothes, some dried food, and family photos. Meera walked for hours beside her parents, sometimes feeling scared of what lay ahead. She missed the sound of the waves and the comfort of her old home.

When they reached the city, everything felt strange. Tall buildings, loud traffic, and busy crowds surrounded them. Her father found work as a helper in a market, and her mother began cooking snacks to sell. Life was hard, but there was hope.

Meera soon joined a new school. At first, she struggled to fit in, but she made

friends who taught her city ways. Slowly, she began to dream of becoming a scientist, determined to understand the changing seas that forced her family to move.

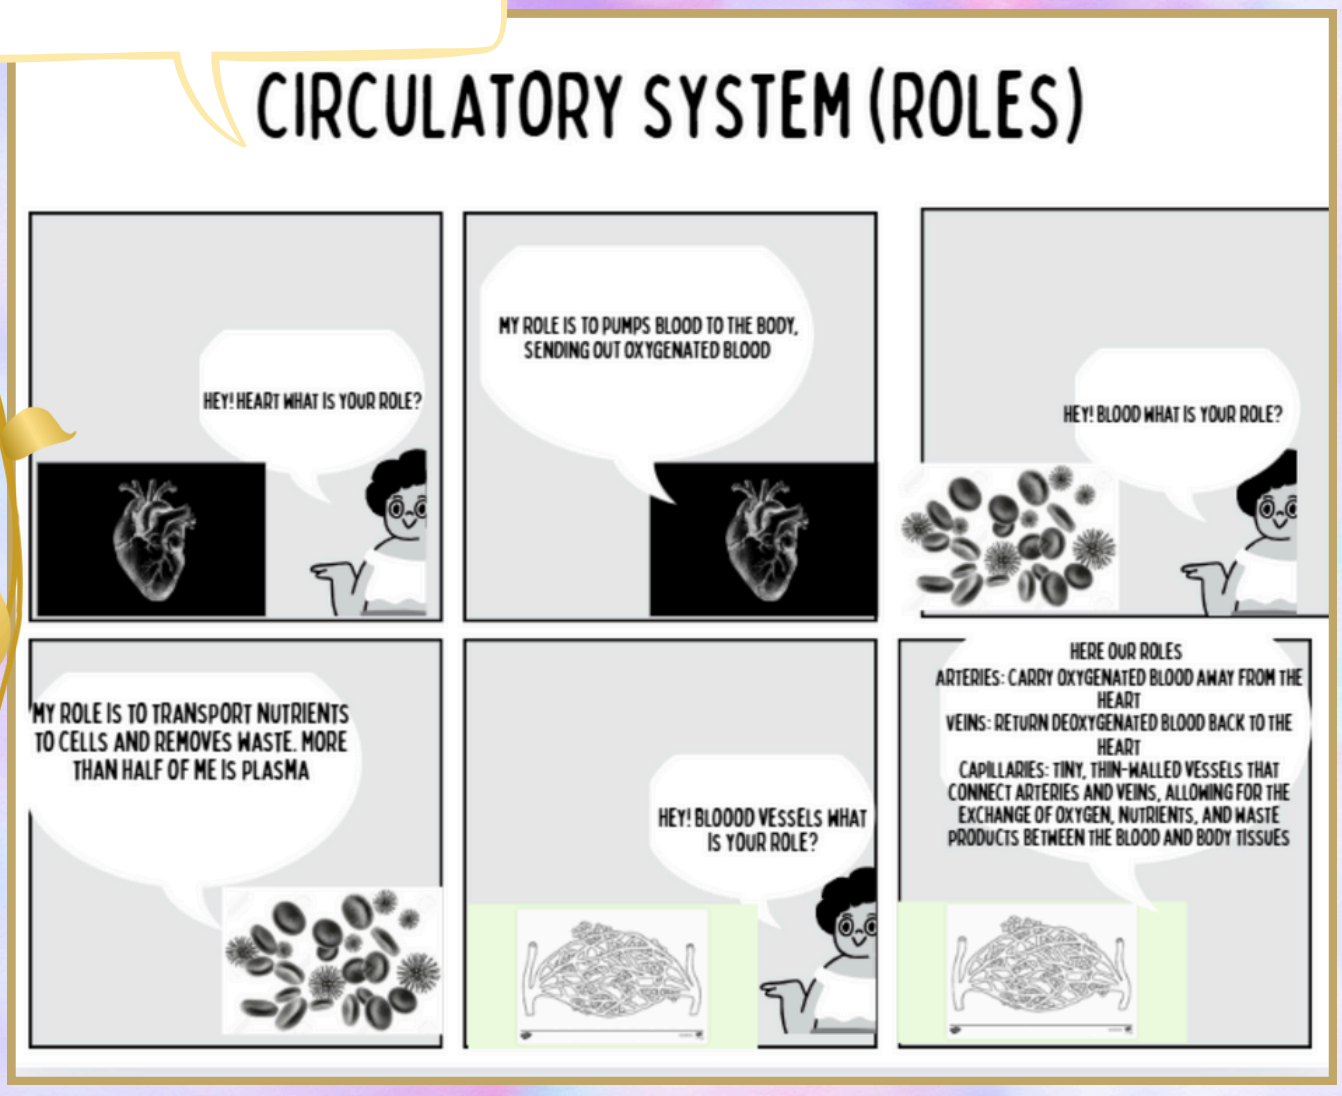

Migration was painful, but it gave Meera's family strength, resilience, and a new beginning.

Jenny the Butterfly

Once upon a time, in a bright green meadow, lived a little caterpillar named Jenny. She was like a small Crab, with tiny legs like a Butterfly. Jenny loved to dream. Everyday, she watched butterflies flying high above her and thought, "They are flying flowers in the sky. Jenny wished she could be one of them.

Then Max the Beetle said, "Believe in yourself! you would be able to fly one day" Jenny trusted Max and told herself, "I will fly one day".

Days Passed Jenny grew tired and Sleepy. She wrapped herself inside a cocoon which was as Soft as cotton and was a warm blanket inside the cocoon. When she finally woke up, something Magical had happen She wasn't a caterpillar anymore She had Colourful wings that were Sparkling rainbows after the rain. Jenny Flapped her wings like a bird and flew into the sky. The wind whispered, "Welcome, little butterfly" she was a rainbow with wings. From that day on Jenny flew across gardens and meadows, Spreading Joy wherever she went.

Moral of the Story

Always Believe in yourself you can be the sun Shining Brightly.

Our Field Trip to Seethi Betta

On 24th October, we went on a field trip to Seethi Betta. It is a special landform, and all my classmates came with me. First, after eating our breakfast, we got into the school bus and left school. As we travelled, we were allowed to eat some snacks at around 9:30 a.m. While looking outside, I saw different landforms like plains and hills. Next, when we reached the place, our bus climbed up a big rocky plateau. Seethi Betta is a hillock with a temple on top. Then, we went inside the temple. I noticed that people had changed the natural cave into a temple. It was interesting to see how humans had transformed the place.

Later, we climbed a little higher on the rock. Some police officers told us stories about the place and the temple. After that, we had snacks and juice that the school had given us. Afterwards, we travelled to a water place. We saw a lake and a dam. The water was flowing like a river, and some people were catching fish. We also saw the water moving down to the lower place. Finally, we had our lunch and started going back to school. On the way, we passed by some factories, and I noticed that some water places near them looked dirty. We reached school around 2:00 p.m. We learned about landforms and how people use and change them.

A memorable moment

Title: My new best friend

Oh my gosh! Thank you for bringing a Kitten, Dada. He brought a cute kitten and I named her Laila. She had so much fun. She played, mewed, ate and loved going on walks and enjoyed herself. She loved catching butterflies and ladybugs. She was the most playful toy at home. Suddenly, she got sick, So then we had to take her to the vet, but sadly, Laila passed away.

Three great ways We Can eliminate Waste and protect our environment.

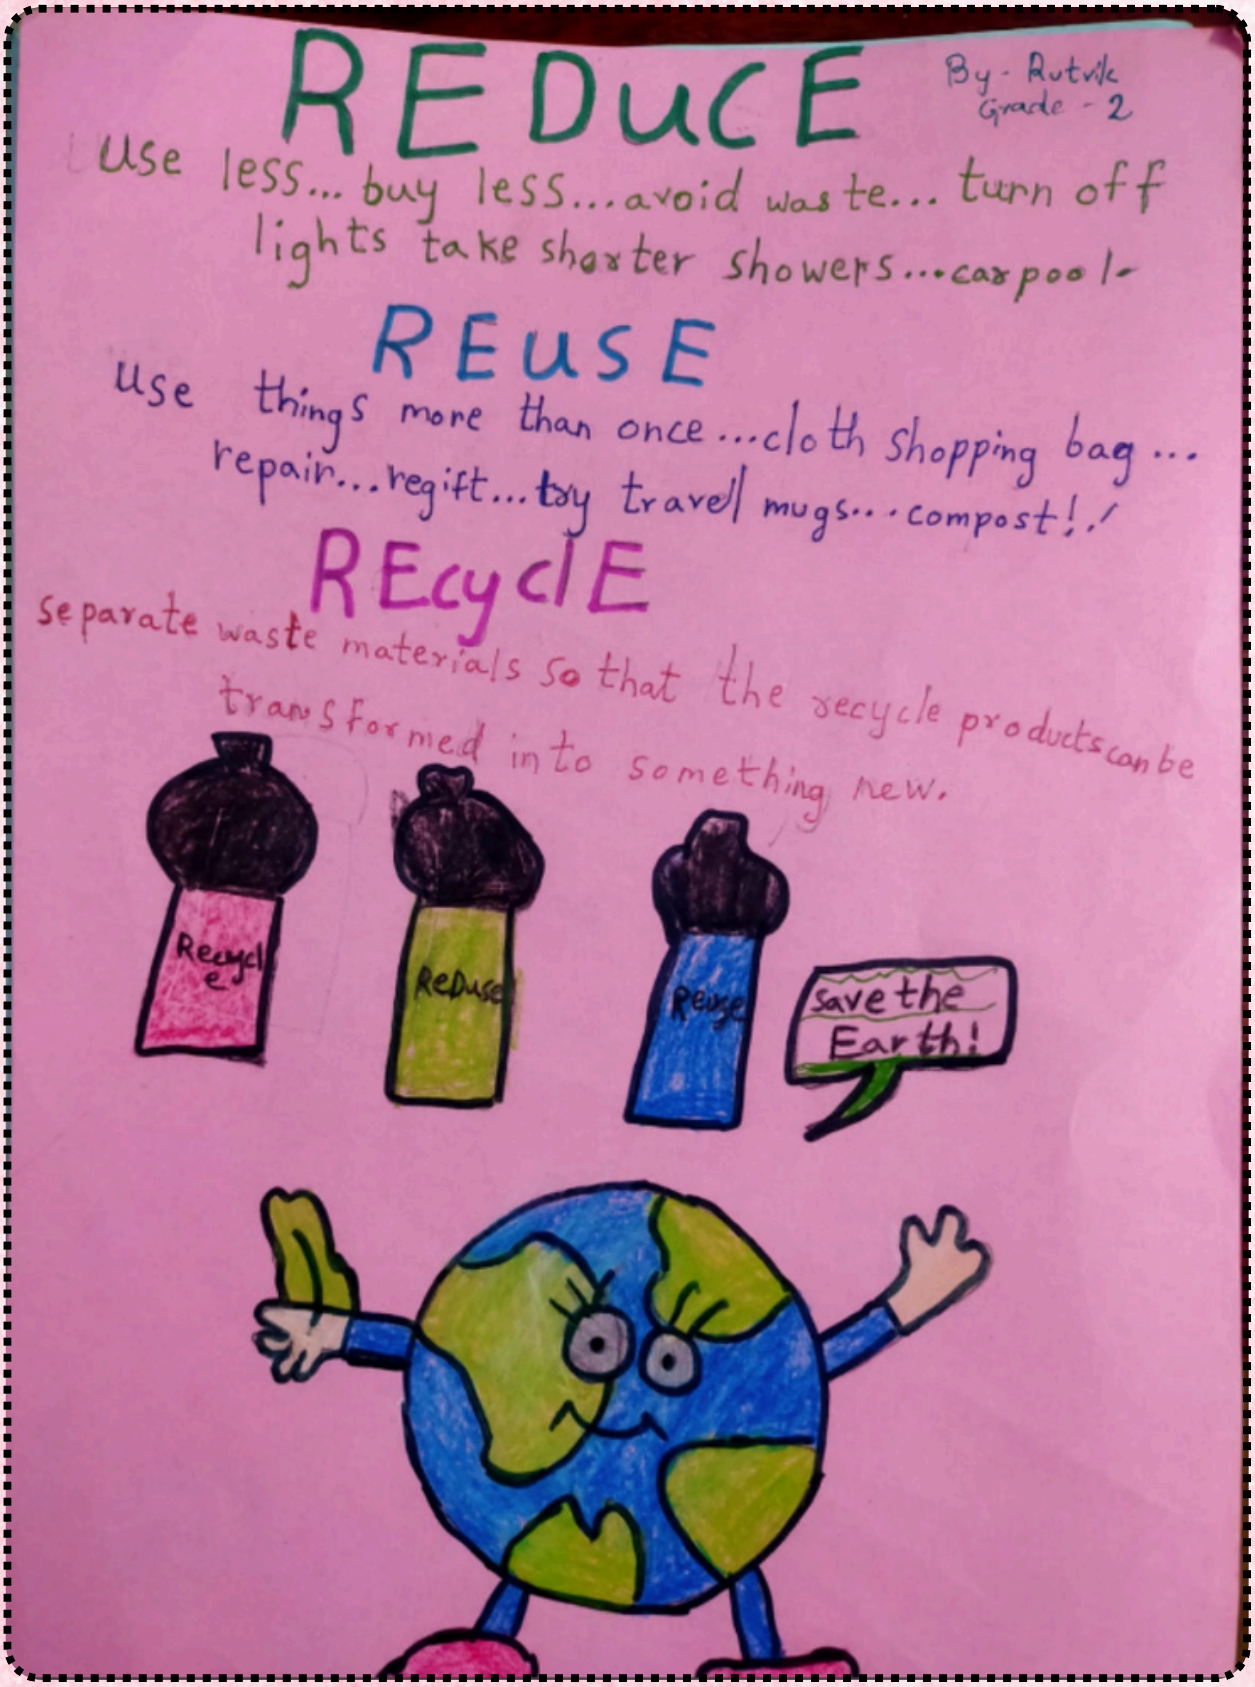

What exactly is "Waste?":
Waste is anything we throw away or get rid of, that doesn't get used.

How can you help?:
You can help by learning about and practicing the three R's of waste management: Reduce reuse and recycle! Practicing all three of these activities every day is not only important for a healthy environment, but it can also be fun too.

WASTE MANAGEMENT

Cleanliness is necessary around the world.

We must reduce, reuse and recycle things around us.

Water sources must be used in limit and save for tomorrow.

Sort the things before throwing it into the trash.

Helps to save environment and stop using un-necessary things to avoid waste.

Grade C-2 Date 14/11/2025 M.yuktha.

Divith S L - PYP 2

On a big yellow school bus,
Through a dark, dark forest.
And every day, he wondered:
"What secrets hide in the forest?"

One day, the bus broke down.
Children played outside.
But Divith felt something calling him...
So, he stepped into the forest.
It was dark.
It was full of sounds.
Then he heard a soft cry.

He followed the sound...
And saw—
A DRAGON!

Divith was scared.
But the dragon was hurt.
A branch was stuck in its wing.

The dragon's eyes said, "Help me."
He removed the branch and
put on a band-aid.

The dragon smiled.
A new friendship was born.

Back at the bus—
It still wouldn't start.
Seeing the dragon, the children screamed in fear
But Divith said:
"Don't worry.
The dragon is here to help!"

He climbed on its back.
The dragon lifted the bus high,
Up, up into the sky!

They flew over trees...
They flew over clouds...
The children laughed and cheered!

At school, the dragon set the bus down gently.
The children waved goodbye.

As the dragon flew away, Divith heard the Dragon say:
"Thank you, my friend. Call me anytime."
Divith whispered back:
"Thank you, my friend."

From that day,
He was not just Divith.
He was— Divith, the Dragon Rider!
He knew from that moment, many adventures await him and his new found friend!

Field Trip

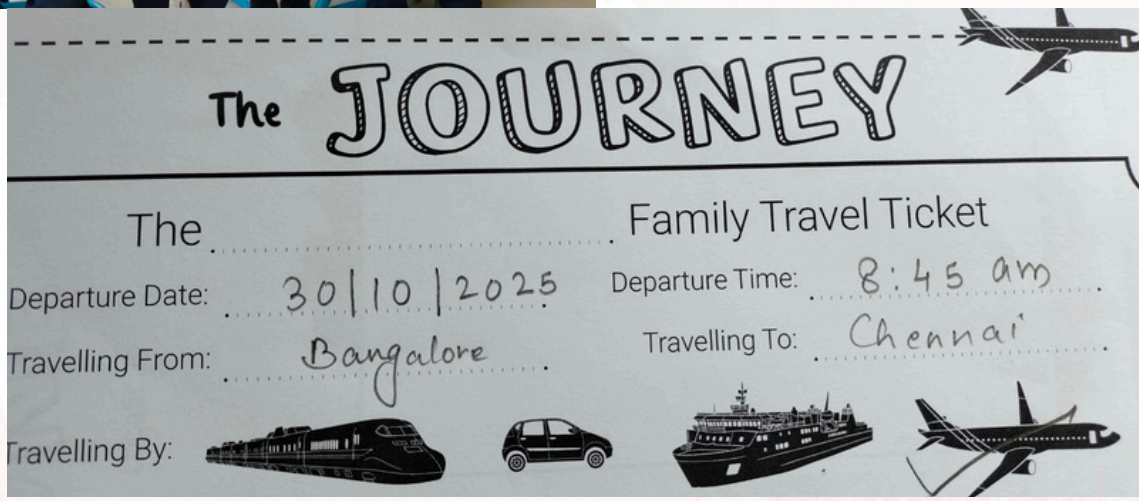

The enthusiastic learners of Grade EYP 2 embarked on an exciting field trip as part of their ongoing Unit of Inquiry on Journeys. Traveling by bus, their adventure took them to the beautiful Rangoli Garden, where they explored the vibrant culture and charm of a traditional village setting. The experience is perfectly connected with their classroom learning about different kinds of journeys.

The day was packed with laughter, creativity, and fun! The children tried their hands at pottery, enjoyed the playful Mickey Mouse jumping jack, and watched a delightful magic show. They danced joyfully on the DJ floor and had a wonderful picnic together before returning with hearts full of joy and stories to tell. It was truly a memorable journey of exploration and celebration!

Journey

As part of their ongoing unit on "Journeys," the learners engaged in a creative role-play activity where they experienced what it feels like to travel by air. The classroom was transformed into an imaginative flight setting using chairs to represent airplane seats. Each learner received a personalized boarding pass from the teacher, complete with details such as the place of departure, destination, departure time, and mode of transport. Excitedly, the young travelers shared where they wished to go and used their tickets to embark on their chosen journeys. This joyful experience helped them deepen their understanding of different modes of travel while enhancing their communication and social skills through pretend play.

Karnataka Rajyotsava

The young learners joyfully celebrated Karnataka Rajyotsava by coming dressed in bright red and yellow, the colors that proudly represent the spirit of Karnataka. The day was filled with excitement as the children sang songs, waved flags, and shared their love for the state. Through music, art, and cheerful smiles, the little ones showcased their pride and respect for Karnataka's rich culture and traditions, making the celebration truly vibrant and memorable.

Little Artist

Mayra demonstrated an impressive level of observation and creativity as she drew a picture by carefully looking at the given images. Her ability to notice details and translate them beautifully onto paper shows remarkable focus and artistic skill for her age. We truly celebrate her talent, confidence, and passion for art at this young stage. Keep shining, little artist!

Agam and his Quagga

Agampreet is a curious and bright young learner who shows a deep love for nature and animals, especially horses and zebras. While learning about extinct animals with his mother, he discovered the Quagga—a fascinating creature that looked like both! Inspired by his discovery, Agampreet independently drew a beautiful picture of the Quagga with great detail and confidence.
His imagination, observation skills, and artistic expression reflect the spark of a young genius in the making. It's truly wonderful to see such enthusiasm and creativity blossom at this early age.
